

Linksys Voice System

IP Key System for Small Businesses

The Linksys Voice System (LVS) 9000 uses the power of VoIP and the Internet to provide big business telephony features on a small business budget. Save big on the phone system itself and on your monthly phone bill.

Save on Calls

The Linksys Voice System is an affordable, feature-rich, multi-line VoIP telephone system that uses the Internet to save money on local and long distance calls.

Enterprise-like Features

Make your small business sound like a world-class enterprise with built-in features like auto-attendant and music or message on hold.

Advanced PBX Features

Take advantage of advanced PBX features like Call Transfer, Call Parking, Intercom Paging, Multi-Line Conference Calls, Hunting, Shared Lines, Call Forwarding, and more.

Your Area Code

Voice over IP plans from many of our Participating Small Business Service Providers allow you to choose your preferred area code and keep your phone number wherever your business relocates.

The Power of One

Thanks to PoE, the Linksys IP phone* is powered by the Ethernet cable, making it the only cable required to function...no need for an AC adapter or power plug.

For Home

The Linksys Voice System is also great as a multi-line residential system for busy, active families.

*Only available in the SPA942 and SPA922

BUSINESS SERIES

A Complete Telephony Solution for a Small Business

The SPA9000 IP PBX lies at the heart of the system, delivering advanced, multi-line features normally found only in expensive enterprise telephone networks. Customize the Auto Attendant to direct calls to the right person or department in your company or program an alternate greeting during off hours. Create a promotional message to greet callers placed on hold or pipe in music of your choice. Park calls and use the intercom for paging. There are over one hundred telephony features built-in!

The LVS 9000 System also features a wide range of inexpensive, Linksys IP Phones to meet your needs and your budget. Add up to 16 lines as your business grows. Choose an IP Phone with one, two or four lines with a high resolution graphical display or the basic no-display model. The Linksys Voice System automatically configures the IP Phones in minutes and with our optional Wireless Adapter, you can even install IP Phones in hard to reach places without running cables.

For added reliability, the LVS 9000 System also supports an Analog Gateway (SPA3000) for connecting to the traditional telephone network. If your Internet service is disrupted or you need to make a 911 emergency call, the Analog Gateway can place calls over the public telephone network.

Best of all, the Linksys Voice System works with many popular Voice over IP Service Providers so you can save money on your phone bills every day. Inexpensive, local and long distance calling for one low monthly fee per line keeps your business connected without a hefty price tag. You'll get super low international rates and features that are simply not available with conventional telephone systems. Choose your preferred free local area code regardless of where you're physically located. Add a toll-free number or a virtual phone number in any area code, forwarded to your business. Your phone number is completely portable so if your business moves, your number moves with you.

Inexpensive to buy and easy to operate, the Linksys Voice System is the telephone solution for small businesses that saves money every day.
